

**WAMCO** POLISHED ROD  
SPACER SYSTEM

---

### Wamco Spacer Load Limits:

Although TYDUS uses the best of materials and manufacturing processes and is fully confident in the Wamco Polished Rod Spacer System components, Customers have asked us, to advise the limitations on the loading of the System.

To this end, we have contracted an Engineering Firm to guide us in this process and have the following information to offer:

#### Spacers:

When properly installed on a Carrier Bar, the yield point on the Spacers has been calculated to be 69,000 lbs. The testing continued on to a “fail” at 104,000 lbs.

#### Suitcase:

When used in accordance with the Operating Procedures, the yield point on the Suitcase assembly has been calculated to be 77,500 lbs. The testing continued on to a fail at 121,000 lbs.

Our research indicates the largest Pump Jacks have a load rating of 42,700 lbs.

From this data, it is easy to see that the Wamco Spacer System provides a wide margin of safety for the Crews using this system.
