

Who we are

Kirkson Management Systems was incorporated in the Province of Alberta in 2018.

Our Goal was to search out unique products, in order to assist our Customers in improving their Production .

Because of changing methods in the way some Manufacturers distributed their products, we decided to focus our efforts on one product.

That product was the Wamco Polished Rod Spacer System.

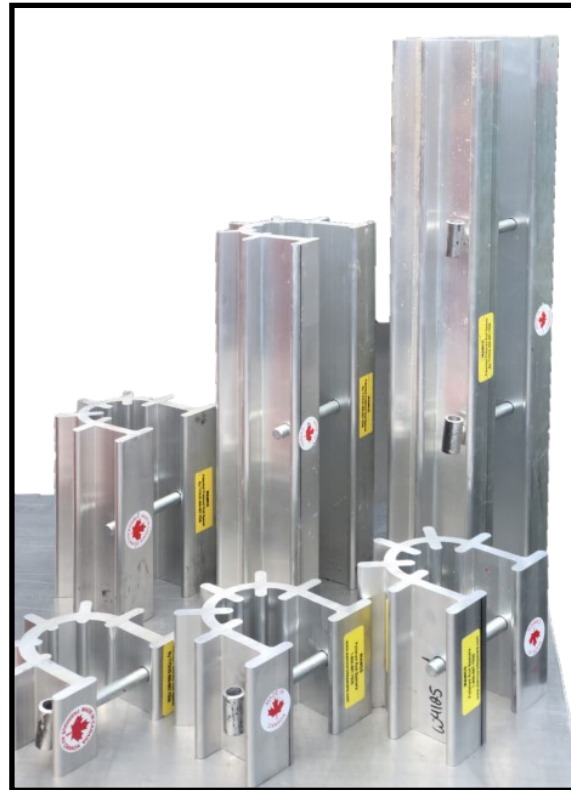

We liked it so much, we bought the Company!

Please call, email, or fax for quotations and/or to discuss the application in your field.

History

The Wamco Polished Rod Spacer System was invented and Patented by Mr. Wayne Head of Cameron, Texas. Mr. Head was a Contract Operator/Pumper and as such, wanted a safer, faster way to do his job.

Mr. Head manufactured and marketed the Spacer System in Texas, until he passed away in 1996.

We, at TYDUS, came upon the product in early 1992 and could immediately see how this product could benefit our existing Customer base, as well as potential Customers.

TYDUS imported and sold the Wamco Polished Rod Spacer System from 1992 through 1996, until Mr. Head's passing. At that time, Wamco was mothballed.

In April 2005, we approached Mrs. Head with the idea of bringing the Company back to life. We struck a deal and purchased the Company.

We are very proud to say one of the Safest, most economical and time-saving devices known to the Oil Patch, is available once again.

Please read on. We are certain your time will not be wasted.

Thank you.
Bill Kirk
President

Benefits

At one point in time or another, most Operators/Pumpers are faced with the task of re-spacing the down-hole pump on a pumping Oil Well.

Whether this is because of trash, gas bubbles, Rod stretch because of Hot Oil Process, Steam Flood or Huff and Puff, the problem is basically the same. Climbing, falls, lost limbs and a whole lot of near misses are almost the norm in trying to keep production levels up.

With The Wamco polished Rod Spacer System in place, all work is done from the ground.

- No climbing!
- No clamps are moved—no trapped, or worse yet, lost fingers and hands!
- Re-space the pump in minutes!
- Tag bottom in minutes!
- Less damage done to the polished rod, therefore; less damage to the packings!
- Cost Effective—The whole System is generally paid for the first time it is used, simply because of time & labour savings.
- In operation in the US and Canadian Oil Fields since 1989!
- Tested to carry loads almost 5 times the largest Pump Jack is designed to carry. SAFE!

Components of the Wamco Polished Rod Spacer System.

Extruded Aluminium Spacers:

- Standard sizes—2" - 3" - 4" - 6" & 12" High
- To fit Rod sizes—1 1/4" - 1 1/2" - 1 3/4"
- Custom sizes available on request
- Complete with Pins for added safety

Handling Tool:

- Used to safely place and remove the Spacers from their position on the Carrier Bar.
- Sectional with enough length to reach the Carrier Bar on virtually any Pumping unit, from the ground.
- Complete with carrying case.

Wamco Suitcase:

- Consists of 2 Adapter Plates and a Spacer, or Spacers of your choice in height.

The Suitcase is used to support the Rod String while changing out the Spacers. With suggested usage methods, there will be no more damage to the Polished Rod during this operation.
